HELLO
smarty

EN

Creos introduces Smarty, your new smart gas meter.

Creos offers two types of gas meter, one wired and one wireless. Both meters meet the same technology standards and are directly connected to your electricity meter so that your consumption data can be securely transferred to your energy supplier.

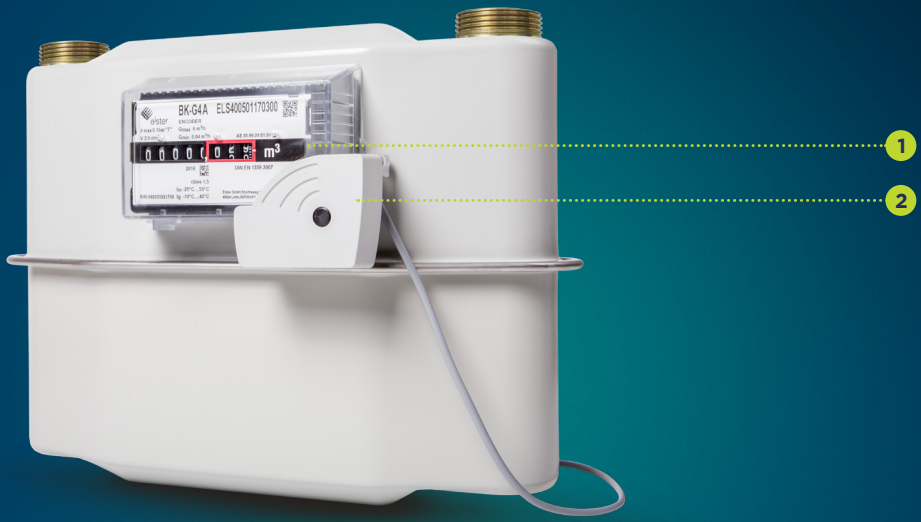
Frequently asked questions

Can I choose which type of gas meter will be installed in my home?

Depending on the gas and electricity appliances in your home, Creos will decide whether to replace your meter with either a wired or wireless meter.

How do I read my consumption data?

In future, you will be able to plug an external display into your electricity meter to display your gas consumption data.



EN FUNCTIONALITIES

1. **Monitor (analog or digital):** This screen displays the consumption index.
2. **Communication module (wired or wireless):** This module is used to connect the gas meter to the electricity meter.
