

Communiqué du 29.09.2017 – Creos Luxembourg & Elia

IC BeDeLux - Technical Go live of the Phase Shifter Transformer is foreseen 11 October 2017

The technical Go live of the phase shifter transformer (PST) situated in Schifflange connecting the grid of Elia and Creos is foreseen 11 October 2017. The technical trial period consists of 2 phases and will have a duration of one year starting from the moment of the technical go-live. After the first phase of the technical trial period an assessment will take place by the project to evaluate whether new insights were gathered that would allow an earlier initiation of the commercialization of the interconnector. From the moment of the technical go-live the Luxembourgish security of supply situation will be further improved and thus realizing the main trigger of the project.
