

## **Official launch of Leneda, Luxembourg's new energy data platform**

---

Luxembourg, March 20, 2025 - After several years of development, Creos Luxembourg, as Transmission System Operator (TSO), is bringing to fruition Leneda, a project initiated back in 2021 with the support of numerous energy market players. This ambitious project, which aims to facilitate the management of and access to electricity and gas data, today marks a major milestone in the digitalization of the energy market, with the official launch of this national reference platform in the presence of Lex Delles, Minister for the Economy, SMEs, Energy and Tourism.

Laurence Zenner, CEO of Creos Luxembourg, comments: *"Leneda represents a major step towards better use of energy data. By simplifying access and guaranteeing a secure framework, this platform actively contributes to more sustainable and efficient energy management."* Leneda offers an intuitive environment, enabling players in the energy sector, including private consumers and producers as well as businesses, to access key data enabling them to better understand and manage their energy consumption and production.

### **Advanced features and future developments**

Leneda offers innovative services to improve the transparency and management of energy data:

- **Full access to energy data:** visualization and monitoring of energy consumption and production close to real time.
- **Secure environment:** compliance with data protection standards with secure authentication via LuxTrust or IDNow.
- **Simplified data sharing:** users can share their data with trusted third-party service providers.
- **Simplified identification of network users:** each user will receive a unique identifier, called an Energy ID, enabling faster processing of all energy-related procedures.
- **A more efficient energy sector:** from spring 2025, all new energy processes, such as the creation of supply or connection contracts, will be progressively integrated into Leneda, guaranteeing smoother, more transparent management.

Lex Delles, Minister for the Economy, SMEs, Energy and Tourism, emphasizes: *"With Leneda, we are taking a decisive step towards more transparent and efficient management of energy data. This initiative is fully in line with our commitment to the energy transition and the digitization of the sector, offering consumers the tools they need to optimize their consumption and anticipate future challenges."*

Leneda is part of a national drive to modernize access to and management of energy data. Framed by the amended law of 1 August 2007 on the organization of the electricity market,

Creos Luxembourg S.A.      T +(352) 2624-8777

the platform is part of a drive to digitalize the sector and make it more efficient, offering users a reliable and secure source of information with a strong emphasis on data protection. Its deployment marks a major step towards a more transparent and accessible energy market.

Leneda will evolve over the coming years to become the central element of the electricity market, enabling more efficient and secure communication between the various market players, and thus facilitating the development of innovative offers on the market. In addition, the platform is designed to integrate future water and heat data.

### **An invitation to discover Leneda**

We encourage all stakeholders to explore the platform and adopt its solutions for more efficient and sustainable energy management. Discover Leneda and join this initiative to facilitate the energy transition. Access to the platform is through [leneda.eu](http://leneda.eu) and is free of charge.
